

ABSTRACT OF THE DISCLOSURE

An electronic apparatus performs wireless communication selectively using one of a first wireless communication device for performing wireless communication by a first wireless communication system and second wireless communication device for performing wireless communication by a second wireless communication system. The electronic apparatus includes a unit for storing base station information relating to a position of a base station corresponding to a first wireless communication system and a position of a base station corresponding to a second wireless communication system, a unit for detecting a current position of the electronic apparatus, and a unit for switching between the first wireless communication device and the second wireless communication device based on the detected current position of the electronic apparatus and the base station information.
